The Area coloured at the rear of the vehicle indicates the region affected by the conversion. Over-all length, wheelbase, height and width of the vehicle remain to the original specification. Weight carrying capacity is also to the original specification unless the customer has arranged to have the necessary suspension alterations carried out by an officially appointed Mercedes Distributor.

MERCEDES ESTATE.

Manufactured by Crayford Auto Development Ltd., Westerham, Kent, England.

This conversion to estate car form is carried out on any of the 'New Generation' (/8) series. Basic specification options (i.e power steering, automatic transmission, self-levelling suspension, etc.) are not affected by the conversion.

The body rebuild comprises a new steel roof section starting level with the body shell B posts and extending to the rear tailgate aperture. The rear quarter panels are fitted with two steel pillars to join an extended cant rail and form a rear quarter light aperture in the orthodox fashion. The tailgate is steel throughout and uses the original Mercedes safety lock system. It is hung on twin roof hinges and supported when open by two compressed gas struts. The rear window is manufactured from toughened safety glass and is fitted with electric demister wiring as standard. Interior trim is in keeping with the functional and robust Mercedes tradition. The rear seats are particularly comfortable as the rear cushion is to the original specification in materials and spring depth. The cushion is hinged at the leading edge and when swung up into the vertical permits the seat back to drop down into two nylon 'V' locks fitted under the cushion. In addition to this seating operation the cushion can also be easily removed to permit an absolute maximum luggage carrying capacity of 98 cubic feet and a straight floor length of 83 inches.

Sole U.K. distributors for this range are Messrs. Sargeant & Brooker Ltd. of East Grinstead, Sussex, telephone no: East Grinstead 23678.
